Career Objective

Entry-level Software/Web Developer with React.js and WordPress experience, Python/ML projects in computer vision & security. Built and maintained an e-learning platform and developed full-stack dashboards with Dockerized backends. Strong problem-solving REST/GraphQL & deploying ML-powered features

Core Competencies

- **Languages:** Python, C, SQL, JS
- **Frontend:** React.js, HTML, CSS, Figma
- **Backend & DB:** Node.js, MySQL, RDBMS, SupaBase, MongoDB, REST/GraphQL
- **Tools & DevOps:** Git, GitHub, Docker, VS Code, CLI, Power BI
- **CMS & Platform:** WordPress, Tutor LMS, plugin configuration, Extension Developer

Achievements

- Winner - SIF Pitch Fest 2026
- Finalist - SDG Hackathon 2026
- Internal Round Qualifier - SIH 2025
- Participant - SIH 2022 and 2024
- Top 500 - Niral Thiruvizha 3.0

Certificates

- NPTEL JAVA – Elit + Gold
- Full-Stack Web Development Bootcamp
- Cybersecurity & Ethical Hacking
- Ignite Bootcamp - Venture Idea Development
- UiPath RPA Citizen Developer Foundation
- Power BI Workshop
- Cloud and Virtualization

Languages Known

- Urdu (native)
- English (professional working proficiency)
- Tamil (fluent)
- Hindi (conversational)

Education

SONA COLLEGE OF TECHNOLOGY (PG)

Master of Computer Applications / 8.6 CGPA

Expected graduation: 2027

SONA COLLEGE OF ARTS & SCIENCE (UG)

Bachelor of Computer Applications / 7.9 CGPA

Graduated May 2025

Internship

Sasha Infinity — Web Developer

Duration: Jun 2025 - Present

- Developed and maintained a Tutor LMS e-learning platform, delivering interactive course modules and faster content updates.
- Customized and managed WordPress websites, including plugin configuration, updates, and performance optimization.
- Integrated AI-driven tools to enhance user interaction and streamline platform functionality.

Project

Title: Credit Card Fraud Detection Using ML.

Tools: Python, Scikit-learn, Pandas, NumPy

Description: Built a machine learning classification model to detect fraudulent transactions by analyzing financial behavior patterns.

Title: THOZHIRPORUL - Smart Industrial Monitoring System.

Tools: React.js, Node.js, Express.js, PostgreSQL, Docker.

Description: Developed a full-stack industrial governance platform with real-time dashboards, GIS park mapping, automated compliance tracking, workflow automation, and AI-assisted decision support for monitoring industries across SIPCOT industrial parks.

Title: Dual-Layer AI Firewall for Securing LLM Applications.

Tools: Python, FastAPI, XGBoost, Docker, PostgreSQL

Description: Developed an AI firewall that detects and blocks prompt-injection attacks on LLM applications using ML classification and behavioral analysis.
